

MAGNUM ALUMINUM CROSSBOXES

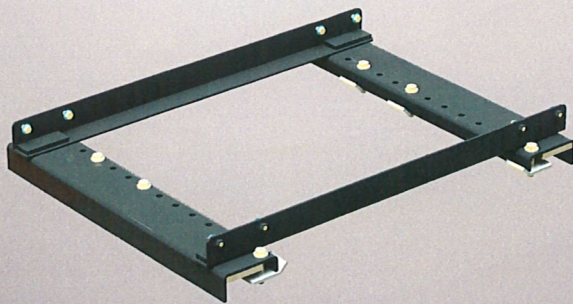

Designed to do a serious days work for the Contracting, Municipal, and Landscaping Industries. The following standard features continue the Magnum reputation of Quality Design, Long Life, and Durability:

Premium door hardware includes chrome plated heavy duty alloy hinges and lockable whale tail handles plus gas shocks to hold doors open for an obstructed access

Drip molding above doors and large dual durometer bulb seal for extra weather protection

"Stress Distributing Doublers" increase the box material thickness under direct load and eliminate high stress flex areas in the box itself.

Four air vents come standard in each box to help purge odors and vapors from inside.

"Magnum No Drill Quick Kit" installs to truck frame with no drilling using multi position frame clamps. Technicians install frame comfortably in the standing position from above, easily working around truck crossmembers and frame clutter. The pre drilled Crossbox is then set in place and bolted to installation frame from above, with no need to crawl under the truck.
